

FACTS ABOUT ELECTROLYSIS

Electrolysis is the only process of permanent hair removal approved by the FDA and AMA. It has 125 years of clinically proven safety and effectiveness. A very fine sterile probe is inserted into the hair follicle alongside the hair and a small amount of electrical current is added. This destroys the follicle at its root and spreads to kill the surrounding stem cells which would have made the –next generation—hair.

There are three modalities in electrolysis-Galvanic, Thermolysis and The Blend. We are skilled in all three and are specialists in The Blend which accomplishes this destruction with dual action: heat accelerates a cellular chemical reaction. It is very effective.

Research shows regardless of the modality used it is ultimately the skill of the electrologist that makes the difference.

It is impossible to destroy the hair follicle without sensation because it is surrounded with a network of nerve endings. However, amount of energy used and time duration can be adjusted for a most comfortable treatment.

FUN TIPS

- ◆ Plan well in advance for hair removal for your wedding, trips and cruises. Remember men and women have multiple growth cycles. You owe it to yourself and your partner.
 - ◆ Eyebrows frame the face for men and women. Unibrows and pencil thin eyebrows are out. Let us design brows perfect for you. We have a flair for it.
 - ◆ Show off your diamonds! Remove that knuckle, arm or ear hair. Jewelry shows much better without it.
 - ◆ Have a hairy tattoo? Clear it permanently so that the artistry can always shine through.
 - ◆ Wear a hearing aid? Remove your ear hair permanently. It will be more comfortable and may increase the life time of the device.
 - ◆ Some medications have hair growth as a side effect, check your meds and see if yours does.
 - ◆ Permanent hair removal is not accomplished in one treatment.
- You'll appreciate the lasting results.*

OUR PROCESS

After you've taken the first step to call our office you will receive your first pleasant surprise: we will schedule a 45 min. in depth consultation at no charge to you. The consultation sets the basis for everything that follows. You will grasp the cyclical nature of hair growth, all of the contributing factors to it and how to maximize treatment to obtain the permanency you desire.

Upon completing a confidential health history we will review any contributing factors to your hair growth problem including previous methods of removal and medications which may be stimulating hair growth.

Next you will see our sterilization room and we will show you how you are protected. Then we will show you a clean, comfortable treatment room that contains

www.JSElectrolysis.com

state of the art equipment from our fiber-optic telescopes (intense lighting and magnification), to our comfortable treatment bed, gold disposable probes and quality topical anesthetics. Soothing music and aromatherapy are also used in this room making all treatments clean, precise and relaxing. We set the standard at excellence.

Then we will plan a course of treatment that best suits you. Our hours are customized to your needs. We leave ample time for treatment to ensure your comfort and privacy.
